Our vision for cycling in Birmingham

At times we have to look to the past to see routes to the future of a city – and Birmingham is doing just that. Once famous for the production of bicycles, Birmingham has had a real impact on cycling around the world.

Today, we’re experiencing a revolution that is, once again, making cycling a real choice for people as they move around our city.

‘Birmingham Connected’ sets out our ambition to create an innovative and green city that meets the needs of its growing population. Cycling has a big part to play in delivering a sustainable transport system. With the ‘Birmingham Cycle Revolution’, we are creating a future that will enable five per cent of all trips in the city to be made by bike by 2023 and 10 per cent by 2033. As Europe’s youngest city, by population, we are certainly up for that.

Big steps have already been taken on this journey. You only have to look around to see the canal heritage that has been transformed, or the thousands of free bikes given to people in the most deprived areas of the city, opening up local employment opportunities. 2018 will be an exciting year, with plans in place to create cycle super highways on the A38 and A34.

‘Bike Life’ gives us an invaluable insight into our progress and the views held by our residents. It helps us to understand how we can provide safe, attractive and accessible cycling infrastructure that will enable the growth in cycling that we want.

But there’s still a lot of work to do! We want our city to be less congested, greener, safer and healthier. To do that, we have to win over the hearts and minds of the population not yet cycling, by offering better facilities for their use, so giving them the confidence to join the Birmingham Cycle Revolution.

Councillor Stewart Stacey
Cabinet Member for Transport and Roads
Birmingham City Council

Introducing Bike Life
Sustrans, the charity making it easier to walk and cycle, is collaborating with seven cities in the UK – Belfast, Birmingham, Bristol, Cardiff, Edinburgh, Greater Manchester and Newcastle – to report on progress towards making cycling an attractive and everyday means of travel.

There are substantial benefits to Birmingham from people cycling

- 19.5 million trips made by bike in Birmingham in the past year
- Saving the NHS £1.4 million annually, equivalent to the average salary of 60 nurses
- Bicycles take up to 14,462 cars off Birmingham’s roads each day, equal to a 43-mile tailback
- £56 million total annual benefit to Birmingham from people riding bikes for transport and leisure

There is huge potential for more people to ride bikes...

- 3% of Birmingham residents usually cycle to and from work and 3% of all trips are made by bike
- 16% of people live within 125m of a cycle route
- 56% would like to start riding a bike, or could ride their bike more
- 22% think cycling safety is good

...and public support to make that happen

Residents in Birmingham think investing in more street space for cycling, walking and public transport is the best way to keep the city moving, improve people’s health, and reduce air pollution.

- 73% say Birmingham would be a better place to live and work if more people cycled
- 81% of people would like to see more money spent on cycling
- 65% of people would find protected roadside cycle lanes very useful to help them cycle more
- 79% of residents support building more protected roadside cycle lanes, even when this could mean less space for other road traffic

---

* Survey conducted May-July 2017.
Making progress
Provision and levels of cycling in Birmingham

Bike ownership in Birmingham

A bike gives people more choice for getting around, helping them to reach jobs and services, and to see family and friends more often.

In Birmingham, over two fifths of households (44%) have access to at least one bike. Two thirds of households (66%) with children have at least one child’s bike.

Most households that own a car also own a bike. People use different modes for different journeys.

Adult bike ownership by households

Car and adult bike ownership by households

Bike only: 5%  
Car and bike: 39%  
Car only: 38%  
Neither: 18%

Car and bicycle ownership refers to the percentages of all people living in households that own cars/bikes. Note that census data is normally reported as the percentage of households with given numbers of cars.

What’s available and who’s aware?

174 miles of cycle routes including
133 miles of routes physically separated from vehicles*, including 47 miles improved since 2014
16% of people live within 125 metres of a cycle route

28% of people are familiar with the traffic-free routes in Birmingham

3,227 public bike parking spaces, equivalent to 40 bike riders per space

612 railway station parking spaces for bikes, equivalent to one parking space for every 164 passengers per day

Who is cycling?

In Birmingham, over 65s, women, and black and ethnic minority communities are under-represented when it comes to riding a bike.

For age and gender, the division of Birmingham residents uses 2015 estimates. For ethnicity, it uses the 2011 census.

How often are people riding a bike?

44% of Birmingham households have access to a bike yet only 12% of residents cycle at least once a week

Where are people cycling?

36% of Birmingham residents’ cycle trips are for work or education

3% of Birmingham residents usually cycle to and from work

Bike Life Birmingham 2017

* Includes protected bike lanes, shared footways and paths away from roads.

** Ridden a bike in the past four weeks when the survey was conducted in May – July 2017.
Since the Birmingham Cycle Revolution programme began in 2013 a commitment has been made to provide better cycling facilities on the roads, canal towpaths have been resurfaced, 22km of routes through parks and green spaces have been improved, and 8km of completely new cycle routes have been built.

Alongside this is a programme of supporting activities, giving people more opportunities to experience cycling first hand. The commitment to reduce the speed limit on local roads and local centres to 20mph will ensure that everyone who wants to can walk or cycle in relative safety. There are now four 20mph pilot areas fully operational in the city. We have also worked closely with West Midlands Police to introduce the ‘Close Pass’ initiative that aims to protect vulnerable road users and enforce safe passing distances.

Before the launch of Birmingham Cycle Revolution 2% of journeys were made by bike. This rose to 3% in 2015, and the ambition is for 5% by 2023 and 10% by 2033. We know that we still have a way to go to reach our targets, but the city council, along with our partner organisations and local cycling groups are working together to make this a reality.

Birmingham has a long term plan to make cycling an easier and safer form of transport for journeys to work and for leisure. It supports the Birmingham Connected Transport Strategy, launched in 2014, which shows how over the next 20 years Birmingham City Council will reinvent the way in which people and goods move across the city.

Creating cycle-friendly canals

Over the last two years, the city council has worked with the Canal & River Trust to provide a new all-weather surface on seven canal routes in Birmingham covering 54km of towpaths.

In addition several access points on the canal network have been improved and in the city centre lighting and way-finding has been enhanced.

Many of the canal routes were previously in a poor state, with water collecting in puddles and in winter creating patches of ice. This made cycling and walking unpleasant and sometimes hazardous.

The canals are used by commuters and leisure cyclists alike and provide a great off-road walking and cycling network allowing traffic-free access to many parts of the city, with amazing links to surrounding areas and beyond. Between 2014 and 2016, counts show that there has been an increase of 76% in the usage of four canal towpaths: Grand Union, Birmingham Mainline, Birmingham & Fazeley and Worcester & Birmingham.
Bike Life Birmingham 2017

The impact
The health, economic, and environmental benefits to Birmingham

Many people are cycling in Birmingham

19.5 million trips made by bike in Birmingham in the past year which altogether adds up to 78 million miles every day.

In Birmingham, the physical activity benefits of cycling prevent 23 early deaths annually* valued at £73 million* based on what people say they would pay to improve their chances of survival, and calculated using the method set by the World Health Organisation.

Cycling also averts 212 serious long term health conditions annually, saving the NHS in Birmingham £1.4 million per year equivalent to the average salary of 60 nurses.

Unlocking significant health benefits in Birmingham

In Birmingham, the physical activity benefits of cycling prevent 23 early deaths annually* valued at £73 million* based on what people say they would pay to improve their chances of survival, and calculated using the method set by the World Health Organisation.

Cycling also averts 212 serious long term health conditions annually, saving the NHS in Birmingham £1.4 million per year equivalent to the average salary of 60 nurses.

Keeping your city moving

Studies suggest riding a bicycle rather than driving frees up road space. This helps to keep Birmingham moving.

More people riding bikes has environmental benefits

8,375 tonnes of greenhouse gas emissions saved annually equivalent to the carbon footprint of 2,043 people.

More people riding bikes improves air quality: 16,509 kg of NOx and 1,797 kg of particulates saved annually.

In Birmingham 520 early adult deaths occur each year where long-term exposure to air pollution (PM2.5) is deemed to be a contributory factor.

* Calculated using WHO/Europe Health Economic Assessment Tool (HEAT) which enables an economic assessment of the health benefits of cycling by estimating the value of reduced mortality resulting from specified amounts of cycling.

Benefiting individuals and the local economy

82p per mile net benefit for each mile cycled instead of driven which adds up to £22 million annual benefit to Birmingham from people with a car choosing to cycle for transport.

£56 million benefit to Birmingham from all trips made by bicycle*

These figures are based upon monetising the benefits and drawbacks of driving and cycling. This includes travel time, vehicle operating costs, health, congestion, infrastructure, local air quality, noise, greenhouse gases and taxation.

8,000-12,000 bus passengers

5,000-10,000 people on bikes

5,000-10,000 pedestrians

800-1,100 people in cars

Studies suggest riding a bicycle rather than driving frees up road space. This helps to keep Birmingham moving.

More people riding bikes has environmental benefits

8,375 tonnes of greenhouse gas emissions saved annually equivalent to the carbon footprint of 2,043 people.

More people riding bikes improves air quality: 16,509 kg of NOx and 1,797 kg of particulates saved annually.

In Birmingham 520 early adult deaths occur each year where long-term exposure to air pollution (PM2.5) is deemed to be a contributory factor.

* Calculated using WHO/Europe Health Economic Assessment Tool (HEAT) which enables an economic assessment of the health benefits of cycling by estimating the value of reduced mortality resulting from specified amounts of cycling.

*The value of £56m is made up of £22m plus the value of purposeful trips cycled by people without access to a car, plus the value of leisure cycle trips made by everyone.

14,462 return cycle trips are made daily in Birmingham by people that could have used a car. If these cars were all in a traffic jam it would tail back 43 miles.

If these cars were to be parked they would take up the space of 12.5 Birmingham Cathedral grounds.

Studies suggest riding a bicycle rather than driving frees up road space. This helps to keep Birmingham moving.

Marcia Bell, Ride Leader

I received one of the 4,000 bikes given away by Birmingham City Council. This spurred me on to riding to work, helping form a community cycling club and to become a ride leader.

The roads in Birmingham are very busy so it can be very daunting if you are not a confident cyclist. I have had a few near misses that make me extra cautious on some roads and totally avoid others.

I know that the Council is making efforts to improve the cyclists’ lot but I do think there needs to be more dedicated cycle lanes especially on the major roads that link to the city centre. With better provision I would cycle more and I am sure that I am not alone on that front.

Winning an Ashden Award has put Birmingham in the spotlight which I hope will raise the profile of cycling and encourage more people like me out of cars and onto bicycles.

Selina Bamforth, Engineer

I’m an environmental engineer, working in central Birmingham. I cycle to work every day from Moseley. I have always cycled in preference to driving, as I love the freedom, flexibility and speed in getting from A to B. And keeping fit is a bonus!

We have an amazing canal network in Birmingham, and a super set of cycle routes including the River Rea route, but if you don’t live close to one of these, cycling on the Birmingham roads can be a challenge.

Iftikhar Ahmed, “Full-time Grandad”

I’m a retired RAF aircraft engineering technician and full-time grandad. I was 14 years of age when I last rode a bicycle, so in 2016, when I signed up for a charity bike ride, there had been a 44-year gap in my cycling.

Riding around Birmingham now is a completely different experience to the sedate one before; bumper-to-bumper traffic, huge articulated lorries, dodging pot holes, even the bikes are more complex.

Inner-city roads can be very scary at times. I’m in my 2nd year of being on the road now and experienced and more comfortable with the city surroundings — I’m loving it. I hear of and see a lot of initiatives to encourage more cyclists out; improved cycle routes, Big Bike Revival, bike hubs and clubs opening up all around Birmingham.

As more cyclists become visible to the urban driver, I can see Birmingham becoming an increasingly bike-friendly city.
Barriers and potential
What needs to change to make cycling commonplace

Safety and security continue to be a significant concern

Riding a bike feels less safe than other ways of travelling

James Connolly and Stacey Jarvis, Co-Owners, Gorilla Coffee Café

I co-own Gorilla Coffee Café along with Stacey Jarvis. We wanted to create a community feel where cycling, and an active lifestyle is encouraged whilst still enjoying good things in life like cake and beer!

The city has an outstanding network of canals and towpaths that have been rejuvenated. Cycling the tow path, particularly in and around Brindley Place, is a joy. However for 40 years, Birmingham has been dominated by the motor vehicle.

We need to see ambitious infrastructure investments that sacrifice space dedicated for the car, to be handed over to bicycles, pedestrians and public transport.
What the public want
Investment, safety and dedicated space

Prioritising investment in cycling and walking
Overall residents in Birmingham think more space for cycling, walking and public transport, as opposed to additional space for cars, is the best way to keep the city moving, improve people’s health, reduce air pollution, and make streets more attractive.

81% of residents would like to see more investment in cycling in Birmingham
77% in 2015

This includes 69% of those aged over 65, those least likely to ride a bike
73% in 2015

- Keep your city moving: 23%
- Improve health and fitness: 31%
- Improve air quality: 28%
- Make streets more attractive: 39%

Bike to the future
Our ambition and plans to make it happen

The Birmingham Cycle Revolution is making cycling more common, for transport and for leisure. The aim is to make the whole city less congested, greener, safer and healthier by creating a more attractive urban environment in local centres, key transport corridors and the city centre.

Green Travel Districts
Cycling will be improved in local centres and Green Travel Districts, which are designated areas where many people live or work. Every day, a large number of journeys will begin or end in a Green Travel District, and we want to make sure it is easy, pleasant and safe to walk, cycle and take public transport in them.

Cycle Superhighways
In the 2015 Bike Life Report eight in 10 people wanted improved safety for riding bikes. To address this Birmingham City Council is about to build two high-quality cycle superhighway routes from Selly Oak and Perry Barr to the city centre via the A38 and A34.

These will be largely segregated from motor vehicles and offer a more comfortable cycling experience on two of the city’s major roads, and make it possible to cycle easily and safely from the north to the south of the city. The routes will serve the busy environment of the city centre, integrating with redevelopment taking place.

Continuing to build our green network
Birmingham is one of Britain’s greenest cities with more than one fifth of its area consisting of parks and nature reserves, many of these linked by rivers, watercourses and canals. The city will continue to build on this green capital by supporting residents to access the greenway infrastructure and to become a healthier, happier and more productive city.

By 2031 Birmingham will be renowned as an enterprising, innovative and green city that has undergone transformational change and growth in its economy. The Birmingham Cycle Revolution will continue to help achieve the Birmingham Connected vision for reinventing the way people and goods move across the city - a long term vision for transport that allows our city to grow and succeed.

Bike Life Birmingham 2017
Notes on terminology and methodology:
The attitudinal survey was conducted May to July 2017.

Due to the rounding up or down of individual figures, the percentages on charts may not total 100% exactly.

Survey results have been tested for change between 2015 and 2017. The level of significance has been set at 0.01 but these should be seen to be indicative only, as they have not been corrected for multiple comparisons. Where a survey result is shown as a change from 2015 this was a statistically significant result at this level.

Note that some values published in 2015 have been recalculated using improved methodology in 2017.

Further details are available at www.sustrans.org.uk/bikelife
